Professional Profile

Front-End Developer, with experience developing and designing web applications and platforms through the consumption of API's, guaranteeing their optimization and access through user-responsive designs. He has knowledge in HTML, CSS, JavaScript, React JS, Github, Postman, Node JS, Express JS and Python. He is characterized by being a professional with great capacity for analysis and adaptability to change. He is currently looking for job opportunities where he can continue learning and developing his passion for the front-end and new technologies for his professional growth.

Experience

Agencia Nacional de Hidrocarburos (ANH) – Contratist (Web Developer Support)
mar. 2023 – current

Responsabilities

- Build and deploy new functionalities, maintenance, updates to the systems and/or software components from the frontend layer of the assigned developments.
- Perform the analysis, design, development, implementation, testing, and deployment of the assigned developments, complying with the information system development methodology established by the Information Technology Office of the ANH.
- Document and version the source code on the development and production servers (if applicable) for every change made to the application or development in charge.

Achievements

- Follow the guidelines established in the requirements to complete the requested developments and/or activities.
- I structured a data query development for another department of the organization using React JS and Tailwind.
- I provided support for changes and improvements requested by end users.
- I conducted testing on developments for their approval for deployment to production.

Aviatecnología (Aviatur's Group) - Programming Technician II
nov. 2022 – mar. 2023

Responsabilities

- Design, write, test, and implement the requested programs and applications for information management, according to the assigned programming environment.
- Control and measure the efficiency of running programs.
- Provide support for internet and intranet web applications to Aviatur group users and assist in the research of new technologies.

Achievements

- I followed the Figma guidelines provided by the UX/UI designer to translate the page design into both web and mobile formats.
- I structured the entire flow presented in Figma for the Circuits product and other screens on the new Aviatur website.

- Display the information from the API provided by the providers.
- I provided support for changes and improvements requested by my superiors that optimized the flow and development of the website.
- I served as a bridge between the information provider and Aviatecnología for the development of the Circuits product.
